Let's Build our AIOS on Bolt AI

✓ Open [Bolt](#)

✓ Paste the below Prompt and your Google Sheet Link (Enable View Access)

Build a Dashboard using the Dark Background Style and Blue Color themed.

It has to have Glass Morphism effect and display the data as shown in the Google Sheet below.

There should be a Refresh Fields button in the top right corner that when clicked will refresh the data from the Google Sheet and on to the Dashboard.

My prompt:

Act as a world-class futuristic UI/UX developer inspired by JARVIS (Iron Man interface).

Build a highly advanced AI Operating System Dashboard with a cinematic JARVIS-style interface.

Design Requirements:

- Dark futuristic background (black/blue gradient)
- Neon blue + cyan glowing elements
- Glassmorphism panels (blur + transparency)
- Circular HUD elements (like arc reactor UI)
- Animated rings, pulse effects, and rotating indicators
- Minimal text, more visual data representation

Layout:

- Center: Circular AI Core (main system status / data visualization)
- Left Panel: Navigation (Dashboard, Data, System, Logs)
- Right Panel: Live Data from Google Sheet (cards or dynamic panels)
- Top Bar: Time, Date, System Status
- Bottom: Activity logs / system messages

Functionality:

- Fetch and display data from Google Sheet link
- Auto-refresh + manual "Refresh System" button
- Smooth transitions and animations
- Hover glow effects

Advanced Features:

- Simulate AI system messages (e.g., "System Online", "Data Synced")
- Add loading animation when fetching data
- Add subtle sound-like feedback visuals (optional animation)

Code Requirements:

- Use HTML, CSS, JavaScript only
- Clean structure with comments
- Mobile responsive (but prioritize desktop cinematic look)

Goal:

Create a JARVIS-inspired AI Operating System interface that feels alive, futuristic, and powerful — not just a dashboard, but an experience.
